

Parental Control for PC and Mobile devices

Keeping your children safe online is an increasing challenge.

Often Children are not aware of the potential risks found online, nor are they likely to be proactively critical about content they see. Our Children need help to develop the skills and confidence to stay safe in an online world.

There are organisations that have lots of useful information for organisations and parents such as:

UK safer internet has tips, advice, guides and resources to help keep your child safe online

<https://www.saferinternet.org.uk/advice-centre/parents-and-carers>

At Springfield we filter our internet connection to ensure children are safe from inappropriate content which include adult, terrorist and extremist material when accessing the internet in school. In order to provide a similar level of safety outside of school you would need a parental control solution that can monitor all of their devices, including pc's, phones and tablets.

There are several applications available to do this some of which are listed below. In our experience Kaspersky safe kids provides a good level of cross-platform protection which we will cover in detail later in the document;

Kaspersky Safe Kids

Kaspersky Safe Kids is a multi-platform solution that provides protection for your children. There is a free version that has limited functionality, but we would recommend using the paid version.

You can install Kaspersky Safe Kids on Windows, Android, iOS, and Mac devices. After installing the application, you will initially get the free version with a limited number of features. To use all the application's features, activate the premium version with an activation code for Kaspersky Safe Kids or Kaspersky Total Security.

With the full version of Kaspersky Safe Kids you can:

- Control the time your child spends on their device.
- Limit the time your child can play games or use social networks.
- Receive detailed reports on your child's online activity.
- Monitor your child's activity on social networks.
- Get information about your child's location and be notified when they leave the allowed area.
- Control the installation of applications.
- Set access rules for websites and applications.
- View information about the battery status of your child's device.

With the free version of Kaspersky Safe Kids you can only:

- Control the time your child spends on their device.
- Control the installation of applications.
- Filter Online Content

If your child uses an iOS device: You can only control access to those applications that are not suitable for a child at the given age. You cannot restrict access to applications by type, e.g. games.

Internet monitoring is only available via the browser bundled with Kaspersky Safe Kids for iOS.
